Journey of Discovery in Mathematics for Parents

The **Journey of Discovery in Mathematics** concrete materials are suitable for children from about the age of three and a half upwards. A sample kit for 2 to 3 children is shown and described in Concrete Resources.

The

Journey of Discovery in Mathematics Handbooks are written for non-specialists to understand.

It is advisable to try out the activities yourself – this does not take very long. After this you can introduce an activity to your child(ren) and play with them and be creative. Be sure to have some copies of the corresponding square grid sheets available and a supply of coloured pencils.

Don't forget: the child's (brain) enjoys or requires social interaction and also time to reflect. Be sure to play with your child and to encourage concentrated solo activity.

Presentations and Workshops

A Workshop is obviously a great help. Consider organising a Workshop in conjunction with friends, the School or a Pre-School Group.
